PROFESSIONAL SUMMARY

Computer science graduate (UNH 2023). Builds tested systems in Swift, Python, Java and Node with one habit: understand the problem, read every line, verify the result.

EXPERIENCE

May–Sep 2022, full time · May–Sep 2023, part time

Telematics Backend Development Intern (two summers)

Liberty Mutual · Remote

Same telematics team both summers. Offered a full-time TechStart software engineer position.

- Developed Java backend components running on AWS Lambda to parse and transform vehicle telematics data for an auto-quote eligibility and scoring pipeline.
- Built unit and integration tests for serverless data-processing services, validating transformations and downstream interactions, and resolved defects through peer code review.
- Documented service behavior, implementation details and handoff procedures that the full-time engineering team adopted, working through daily standups, sprint reviews and demos.

2021 – 2022

Wireless Inexpensive Bathymetry Logger

Seabed 2030 · UNH Center for Coastal and Ocean Mapping

Python, AWS Lambda, Step Functions, S3

- On a team moving a seafloor-mapping data pipeline onto AWS Lambda, Step Functions and S3, built the timestamp Lambda, the interpolation step and the deduplication step.

PROJECTS

2025 – Present

Catch 5

iOS Card Game and Learning App (In Development)

Swift, SwiftUI, Swift Testing, GitHub Actions · github.com/cmurphy1140/catch-5

- Wrote 264 tests that run on every push, pinning edge cases such as an illegal play leaving the game untouched.
- Measured bidding changes against a mirrored benchmark; a policy change raised the win rate from 64.7% to 67.5%.

2026 – Present

Cyber-Physical System Assurance

Home Automation Field Study

Swift, XCTest, WebSockets, OpenAPI

- Built a Swift client with 318 automated tests that reports each command as confirmed, unconfirmed, failed or refused, instead of treating an HTTP success as a light that changed.

2026 – Present

Drive Score

Telematics Scoring Pipeline (In Development)

Python, Kafka, PostgreSQL, pytest

- Rebuilding my internship's telematics pipeline on my own data: seeded trips, a sender that buffers to disk when the server is down, and a consumer that drops bad and duplicate trips.
- Wrote 26 automated tests and a scorecard page with its own API.

EDUCATION

May 2023

University of New Hampshire

B.S. Computer Science · Durham, NH

SKILLS

Languages: Swift, Java, Python, JavaScript (Node), SQL
Testing: Swift Testing, XCTest, unit and integration tests
Cloud: AWS Lambda, Step Functions, S3, DynamoDB, Git, Xcode
Practices: Agile (Scrum), test-driven development, CI, AI-assisted development

SERVICE & OPERATIONS

Apr 2026 – Present

Golf Course Operations

Sandridge Golf Club · Vero Beach, FL

Nov 2025 – Apr 2026

Server, Bartender, and Catering Orchestrator

Post & Vine · Vero Beach, FL

Sep 2024 – Oct 2025

Lead Substitute Teacher, Physical Education & Health

Birches Academy · Salem, NH
