Open to relocating: Boston, southern NH, Providence, Washington DC

Computer science graduate (UNH 2023) and former Liberty Mutual backend intern. Builds tested systems in Swift, Python, Java and Node with one habit: understand the problem, read every line, verify the result.

EXPERIENCE

Telematics Backend Development Intern (two summers) · Liberty Mutual · Remote
May–Sep 2022, full time · May–Sep 2023, part time
Same telematics team both summers. Offered a full-time TechStart software engineer position.

- Developed Java backend components running on AWS Lambda to parse and transform vehicle telematics data for an auto-quote eligibility and scoring pipeline, contributing to process improvements credited with a 30% reduction in operating costs.
- Built unit and integration tests for serverless data-processing services, validating data transformations and downstream interactions and resolving defects through peer code review.
- Documented service behavior, implementation details, and handoff procedures adopted by the full-time engineering team while collaborating through daily standups, sprint reviews, and demos.

PROJECTS

Catch 5 · iOS Card Game and Learning App (In Development) 2025 – Present
Swift, SwiftUI, Swift Testing, GitHub Actions · github.com/cmurphy1140/catch-5

- Developing a Swift/SwiftUI app for playing and learning Catch 5, with a standalone rules engine, computer opponents, interactive tutorials, strategy explanations, and save/resume functionality.
- Wrote 264 automated tests that run in GitHub Actions on every push, pinning edge cases such as an illegal play leaving the game untouched.
- Limited each computer player to its own hand and public information, and routed every move through one checked entry point.
- Measured bidding changes against a mirrored benchmark; a policy change raised the win rate from 64.7% to 67.5%.

Cyber-Physical System Assurance · Home Automation Field Study 2026 – Present
Swift, XCTest, WebSockets, OpenAPI

- Reverse-engineered a professionally installed home automation system's local interfaces, mapping 150 lighting loads, 457 API operations, and 1,502 real-time state channels.
- Built a Swift client with 318 automated tests that reports each command as confirmed, unconfirmed, failed or refused, instead of treating an HTTP success as a light that changed.

WIBL · Wireless Inexpensive Bathymetry Logger, UNH Senior Capstone (CS 791/792) 2021 – 2022
Python, AWS Lambda, Step Functions, S3

- On a team moving a seafloor-mapping data pipeline onto AWS Lambda, Step Functions and S3, built the timestamp Lambda, the interpolation step and the deduplication step.

OTHER EXPERIENCE

Golf Course Operations · Sandridge Golf Club, Indian River County · Vero Beach, FL Apr 2026 – Present

- Run daily operations at a county-owned 36-hole facility: tee-time scheduling and zero-variance cash reconciliation.

Server, Bartender, and Catering Orchestrator · Post & Vine · Vero Beach, FL Nov 2025 – Apr 2026

- Excelled in a high-volume, fast-paced environment through detail-oriented personalized customer service.

Lead Substitute Teacher, Physical Education & Health · Birches Academy · Salem, NH Sep 2024 – Oct 2025

- Independently planned and delivered K-8 PE and health lessons, adapting to student needs and changing schedules.

SKILLS

Languages: Swift, Java, Python, JavaScript (Node), SQL
Testing: Swift Testing, XCTest, unit and integration tests, GitHub Actions, code review
Cloud and tools: AWS Lambda, Step Functions, S3, DynamoDB, Git, Xcode
Practices: Agile (Scrum), test-driven development, CI (GitHub Actions), AI-assisted development, every line reviewed

EDUCATION

University of New Hampshire · B.S. Computer Science · Durham, NH May 2023
